The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 10, 13 and 17-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pitschi et al in view of Cote et al 6447616.

Pitschi et al substantially discloses the claimed invention, including a coaxial electrical connector having at least the metal supporting element 15 made of bronze. Pitschi et al, however, does not disclose the bronze as being made of copper-tin-zinc-lead. Cote et al (column 1, lines 8-12), however, discloses such an alloy, and to make the bronze element 15 of Pitschi et al of this alloy thus would have been obvious, for good strength and conductivity. To make element 15 out of cast bronze would have been obvious, since casting is commonly used to make metal parts.

Applicant's arguments with respect to claims 10, 13 and 17-19 have been considered but are moot in view of the new ground(s) of rejection.
